CHAPTER 1

INTRODUCTION:

The Travel Management System is a web application using django framework and SQLite database. This project is mainly focused on database management system. SQLite database manage all booking related information. This system is designed to manage travel bookings by storing and organizing user, hotel, destination, transportation, package, booking and payment information in a structured database system. User can book packages or plan their own trip by selecting destination, hotel, no of room, no of people, transport, distance range. The system automatically calculates total cost and store the booking records in the booking table. Django's built-in admin interface was used to simplify database management and control the whole system.

PROBLEM STATEMENT:

1. Traditional travel booking system is time consuming.
2. Many systems do not provide a easy way to combine hotel, transport selection, trip duration in one place.
3. User cannot able to plan their own trip.
4. A system is needed to simplify travel booking and improve user experience.

OBJECTIVES:

1. Allow users to book packages
2. Allow users to plan their own trip
3. Store booking information securely
4. Automatically calculate trip cost
5. Develop a user friendly travel booking system

DATABASE TABLE SCHEMAS:

Table 1: Admin Table

Column Name	Data Type	Constraint	Description
Admin_ID	VARCHAR(20)	PRIMARY KEY	Unique ID for each administrator
Username	VARCHAR(50)	NOT NULL	Username used for admin login
Password	VARCHAR(50)	NOT NULL	Login password for the admin account

Table 2: User Table

Column Name	Data Type	Constraint	Description
User_ID	VARCHAR(20)	PRIMARY KEY	Unique ID for each administrator
Username	VARCHAR(50)	NOT NULL	Full name of the user
Password	VARCHAR(50)	NOT NULL	Account password for security

Table 3: Destination Table:

Column Name	Data Type	Constraint	Description
Destination_ID	VARCHAR(20)	PRIMARY KEY	Unique identification for each travel destination
Destination_Name	VARCHAR(100)	NOT NULL	Name of the tourist spot or city

Table 4: Hotel Table:

Column Name	Data Type	Constraint	Description
Hotel_ID	VARCHAR(20)	PRIMARY KEY	Unique identification for each hotel
Destination_ID	VARCHAR(50)	FOREIGN KEY	References Destination Table
Hotel_Name	VARCHAR(50)	NOT NUL	Name of the hotel
Price_Per_Night	DECIMAL(10,2)	NOT NULL	Room cost for one night stay

Table 5: Transport Table:

Column Name	Data Type	Constraint	Description
Transport_ID	VARCHAR(20)	PRIMARY KEY	unique identification for each vehicle type
Transport_Type	VARCHAR(100)	NOT NULL	Category of transport (e.g., Bus, Car, Bike)

Table 6: Distance Range Table:

Column Name	Data Type	Constraint	Description
Range_ID	VARCHAR(20)	PRIMARY KEY	Unique identifier for distance slots
Transport_ID	VARCHAR(50)	FOREIGN KEY	References Transport Table
Min_Distance	INT	NOT NUL	Starting point of the distance range
Max_Distance	INT	NOT NULL	Ending point of the distance range
Price_Per_Person	DECIMAL(10,2)	NOT NULL	Fare per person for this specific distance

Table 7: Package Table:

Column Name	Data Type	Constraint	Description
Package_ID	VARCHAR(20)	PRIMARY KEY	Unique identification code for each tour package
Package_Name	VARCHAR(50)	NOT NULL	Title of the tour package
Destination_Name	VARCHAR(50)	NOT NUL	Targeted tour destination name
Hotel_Name	VARCHAR(50)	NOT NULL	Allocated hotel name for the package
Price_Per_Person	DECIMAL(10,2)	NOT NULL	Base cost per person for this package
Transport_Name	VARCHAR(50)	NOT NULL	Type of vechicals

CHAPTER 3

IMPLEMENTATION:

Figure 1: Homepage

Figure 1 illustrates the Homepage of our system.

Figure 2: Login

Figure 2 illustrates the login page, where registered users can securely enter their username and password to access the system dashboard.

Figure 3:Dashboard

Figure 3 illustrates the dashboard of user.

Figure 4:Package

Figure 4 shows the available packages, where users will select their travel packages and confirm their bookings.

The image shows a 'Package Booking' form for 'Cox's Bazar Tour'. It includes a dropdown menu for 'Number of People' set to 3, date pickers for 'Start Date' (06/02/2026) and 'End Date' (06/04/2026), and a 'Confirm Booking' button.

Package Booking

Figure 14 shows the admin panel where admin manage the database and control the whole system.

CHAPTER 4

CONCLUSION:

The project successfully developed a complete travel management system using Django. This system simplifies travel planning through package booking and plan trip. It provides a smooth booking experience with automated price calculations and secure data management.
